

# PERFORMANCE ELASTOMERIC PRODUCTS

## Performance Elastomeric Products

- > **Anti-vibration & suspension mounts**
- > **Pump diaphragms**
- > **High Pressure bonded plates & gaskets**
- > **Sump straps**
- > **Custom mouldings**

Race-Tec Sealing produces a wide range of custom-designed elastomeric products to support its motorsport customers. Due to the demanding applications, most products are designed with the aid of non-linear finite element simulation.

We are able to offer a full range of materials including exotic materials such as Perfluoroelastomer, for demanding applications. With our vast experience of rubber bonding, we have the ability to chemically bond most elastomers to metal or plastic components. Metals such as stainless steel, aluminium, titanium and steel are commonly used.

Our flexibility & open minded approach allows us to undertake projects for which many companies would be unable to offer a solution. The ability to respond quickly also sees our resources being used for rapid prototyping on high volume OEM production projects.
